Düker Telescopic Stem Extension Set T3

For gate valves and tapping valves GW336 and for butterfly valves

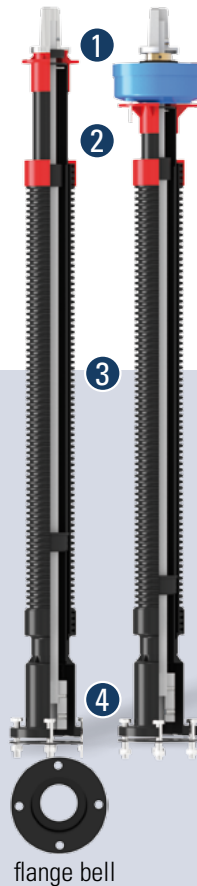

1 The new telescopic stem extension set T3 is an innovative refinement of the successful telescope line T3.

2 The high quality components of this sturdy telescopic stem extension set are supplemented by a stable third protection tube, in order to facilitate the movability of the telescope protection tube in both directions.

Characteristics of the telescopic stem extension set T3 for gate valves and tapping valves GW336

- 1 = centring cap and operating cap, form-locked and sealed with an interior EPDM sealing
- 2 = continuously telescopic
- 3 = protection tube for:
 - better telescopic function
 - higher stability
 - better compacting
- 4 = Clip pin for fast connection, easy and quick assembly without tools

The third corrugated protection tube has been statically designed so it can withstand elevated wall loads during the filling in of the pipe trench. At the lower end, it is thermally welded to the flange bell, and at the upper end it is protected by a dirt cap.

Characteristics of the telescopic stem extension set T3 for butterfly valves

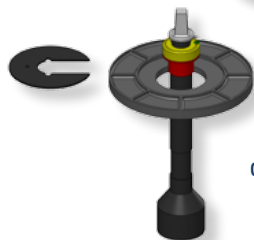

- 1 = centring cap and operating cap, form-locked and sealed with an interior EPDM sealing
- 2 = continuously telescopic
- 3 = protection tube for:
 - better telescopic function
 - higher stability
 - better compacting
- 4 = ASK coupling compatible with gear shaft

Accessories

dirt cap

position indicators

centring discs

operating keys

hand wheels

marking discs

locking device
